

Unlike Anything

See the Uniqueness
See the Savings

Light + Nimble

Building 20' spans without vertical support unleashes creativity, maximizes space utilization and minimizes material requirements. This lightweight superstructure and canopy framing weighs approx. 930 lbs. for a 20'x30'x20' booth and ships in just a single 156" open crate pallet. Less drayage and faster installation mean more budget for designing the ideal exhibit. Cost savings at future shows are rapidly realized.

Height without Hang Points

Eliminate costly rigging labor and potential delays while highlighting your company with impactful branding. Construct 120 is ideal for showcasing branding with 10' high seamless graphics and no need for rigging. An alternative to a hanging sign, the printed sheer canopy spans 234" wide x 160" high.

Efficient, Exclusive Pull-Tite® Locks

Patented Pull-Tite locks deliver amazingly fast, secure and simple frame assembly. The best part — there are no small, loose parts. This entire booth was set up in 46 labor hours with a crew of three and a field supervisor. A three-man crew with no product experience has also proven the ability to build and clad a 16'x16'x14.5' fabric structure in just 9 labor hours.

Built-in Brilliance

Each eye-catching lighting solution features plug-and-play efficiency and pre-run hidden wiring that saves on site electrical costs. Here, double-sided Illuminedge™ LED lightbox technology is integrated to impressively backlight fabric panels. Available integrated lighting solutions also include the LED Color Wash Wall, dynamic and programmable with 4,000+ colors.

Advanced Design

Several design differentiators immediately set Construct 120 apart. Along with its ability to span great distances without support, it is the fastest-installing channel-less extrusion with modern, clean and elegant lines. It is also the largest bendable extrusion available, creating organic curves resulting in a sleek, artfully attractive booth with superior functionality. The intriguing Color Wash Wall "ski jump" curve is made with a 180 degree radius bend.

**CONSTRUCT
120**

46 man hours to set up, 26 to take down with crew of 3 plus Moss Field Supervisor. Two scissor lifts: 5 hours up, 2 hours down.

No rigging costs. A similar-size structure of traditional plywood laminate construction would double the weight and add significant installation time.

No unsightly cut marks in carpet from large base plates – traditional base plates were not required.

Electrical was mapped, positioned for direct connection and hidden within framework.

Built-in Illuminedge double-sided lightboxes uniquely angled for attention-grabbing effect; LEDs supply 50,000+ hours of expected life.

SEG fabric graphic mounting provides lightweight, fast booth-building for a clean and sharp fit.

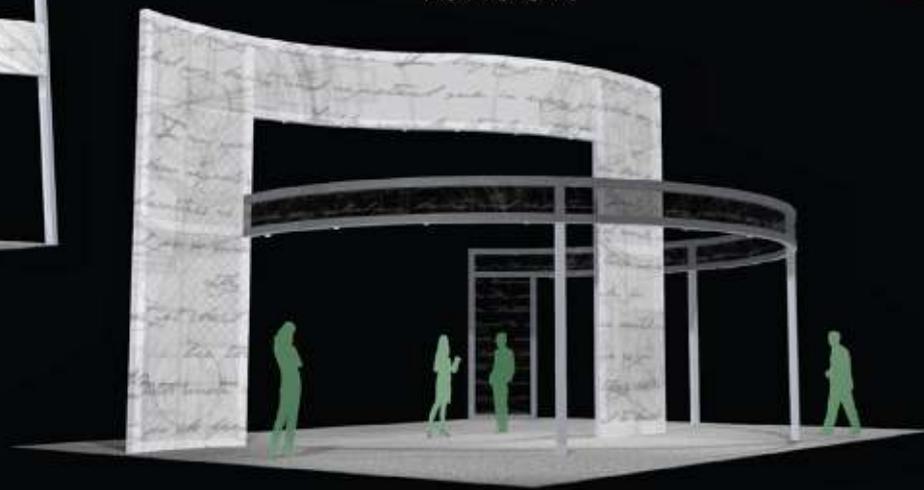

Nothing Sacrificed Everything Gained

20ftx30ft

40x30ft

Construct 120 is a bold platform for creating curves, long spans and better space. All with ease and low cost of ownership. This is how you build the ultimate in attractive, cost-effective exhibitry. This is Construct 120 - **Unlike Anything.**
